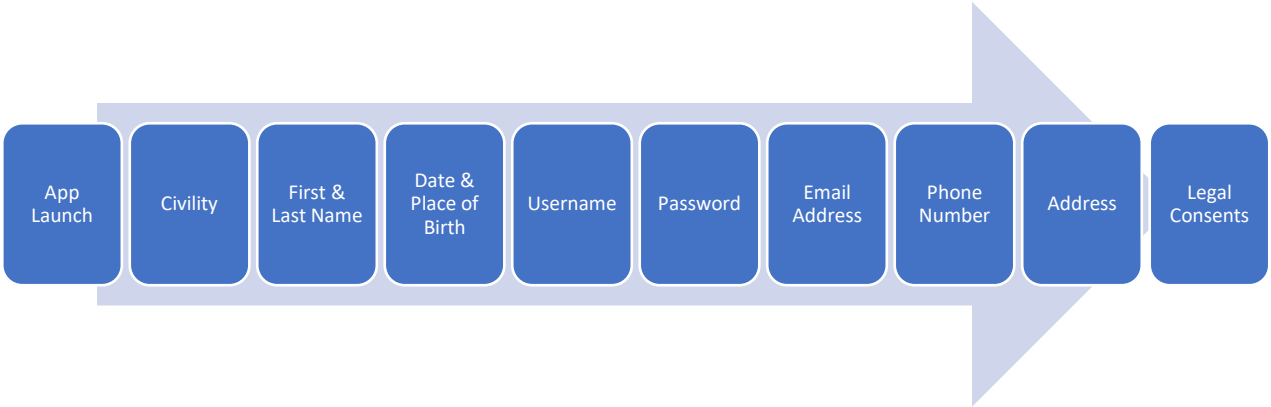
Betclic Onboarding – Revue UX/UI

Part 1: Flow Analysis & UI Review

1. User Flow (Nominal Path)



Step 1 - App Launch
Description: The user launches the application and starts the registration process.

Step 2 - Title Selection
Description: The user selects their title (Mr, Mrs, etc.).

Step 3 - First Name & Last Name
Description: The user enters their first name and last name.

Step 4 - Date and Place of Birth
Description: The user enters their date of birth and place of birth.

Step 5 - Identity Document (Optional)
Description: The user can upload or provide their identity document information. This step is optional and can be completed later.

Step 6 - Username
Description: The user chooses and enters a username.

Step 7 - Password
Description: The user creates and confirms their password.

Step 8 - Email Address
Description: The user enters their email address.

Step 9 - Phone Number
Description: The user enters their phone number.

Step 10 - Address
Description: The user enters their address information.

Step 11 - Address Confirmation (Optional)
Description: The user can confirm their address details. This step is optional and can be completed later.

Step 12 - Legal Consents
Description: The user accepts the required legal consents and terms to complete the registration process.

App Launch

2. Alternative Branches Identified

The "Identity Mismatch" on Deferred Verification

Scenario: The user skips Identity Verification during onboarding, then attempts to complete it weeks later after a legal name change or with an expired ID.

- Why it's critical: This tests the synchronization between the "Name" provided in Step 3 and the data extracted from the ID uploaded later (OCR).
- What to test:
    - Data Conflict: If the name on the ID card doesn't match the "First & Last Name" typed during onboarding, does the app trigger a manual review or block the user?
    - Deep-linking: When the user is prompted to finish their profile "later," does the app land them exactly on the Identity step, or are they forced to re-verify their email/phone?

The "Ghost Account" (Session Persistence vs. Conflict)

Scenario: A user completes the flow up to the Email Address or Phone Number step, then the app crashes or the user loses internet connection before reaching the Legal Consents.

- Why it's critical: This tests your "Incomplete Sign-up" logic. If the system saves the email/phone prematurely, the user might be blocked from signing up again because the "Email is already in use," even though they never finished the legal part.
- What to test:
    - The Re-entry: If the user re-opens the app, does it resume from the Address step, or does it force them to start over?
    - The Conflict: If they start over, does the system throw an error saying "Account already exists" for an account that isn't actually fully created yet?

The "Simultaneous Multi-Device" Login

Scenario: A user starts the onboarding on their phone but realizes they need to upload their Identity Document (ID) from their computer or another tablet where they have a better photo.

- Why it's critical: This tests the synchronization of the "Deferred" status across different sessions.
- What to test:
    - Concurrency: If the user logs into their "incomplete" profile on a second device to upload the ID, does the first device (the phone) update in real-time to show the step as "Completed"?
    - Token Invalidation: Does finishing a skipped step on Device B accidentally log the user out of Device A?

3. UX / UI Observations

- **Error Message Tone (High Severity)**
  The underage error message is aggressive and threatening, which may harm user trust. Recommendation: use neutral, informative language.
- **Validation Inconsistency (Medium Severity)**
  Some fields reject inputs without explanation. Users are not informed about allowed formats.
- **Disabled CTA Without Guidance (Medium Severity)**
  The 'Next step' button is disabled without clear feedback on what is missing or incorrect.
- **Accessibility Issues (Medium Severity)**
  Low contrast and small font size for error messages reduce readability.
- **Legal Consent Overload (Medium Severity)**
  Too many legal elements displayed at once create cognitive overload.
- **Address Verification Clarity (Low Severity)**
  Options are presented without guidance on when to use each method.

4. Regulatory & Compliance Considerations

- Age verification is correctly enforced
- Legal consent is required before account creation
- Fraud and AML information is communicated
- UX tone could better align with responsible gaming principles
